Many types of contaminant removal

Soda blasting is a relatively new process. Developed in The USA; our process, blast media and equipment have been refined to the extent that it is all fully purpose specified and built achieving very high effectiveness and efficiency levels. The process has been used by us for a number of years now in New Zealand with many satisfied clients over a wide range of applications.

The Mighty 'Buster Blaster' Unit

We have the very latest machine and technology imported especially for you and your tasks. The 'Buster Blaster' machine is the only purpose built and patented Soda Blasting machine in the world.

It's fast

In the construction industry some of the contaminants we remove are: paint and road grime, mould, mildew, lichen and moss, tar, glue, and smoke/soot damage from bricks, plaster, concrete, glass, tiles, timber, steel, aluminium and specialist finishes such as fibreglass, soft stone monuments, bronze.....

We also strip paint and surface rust from machinery and vehicles ready for re-spraying or for selling purposes.

The important point to note is that the soda blasting process will leave almost all substrates, or sound mortar and tile grout in an undamaged condition.

Rubber, glass and chrome fittings do not require masking or removal, they are unharmed by the process.

Whether you are waterproofing, repainting, cleaning up or wanting to inspect; soda blasting may be the right option for you.

Water main junction cleaned up for inspection & recoating

It's safe

Our Soda Blasting uses environmentally friendly 100% pure baking soda as its media. It is non abrasive; rather it uses the explosive impact of the media crystals to remove the coating. We use food grade baking soda, at a specific crystal size. Over spray can be safely washed away.

We come to you with our mobile unit.
