Contaminant removal

Soda blasting is a relatively new process. Developed in The USA; our process, blast media and equipment have been refined to the extent that it is all fully purpose specified and built achieving very high effectiveness and efficiency levels. The process has been used by us for a number of years now in New Zealand with many satisfied clients over a wide range of applications.

The Mighty 'Buster Blaster' Unit

We have the very latest machine and technology imported especially for you and your tasks. The 'Buster Blaster' machine is the only purpose built and patented Soda Blasting machine in the world.

It's fast

In industry we remove a multitude of contaminants from a whole range of items. From any hard surface, without affecting the substrate, we remove : glue, sugar/food build up, paint, ink, grease, build up in moulds, stains, surface rust, and sign writing to name just some of the more common tasks.

Whether the item is steel, aluminium, galvanized iron, stainless steel, glass or fibreglass the soda blasting process will leave the substrate in an undamaged condition.

Rubber, glass, aluminium and chrome fittings do not require masking or removal, they are unharmed by the process.

The blast media is not trapped in small cracks and cavities. It simply washes out.

before blasting

Lower section
after blasting

It's safe

Soda Blasting uses environmentally friendly baking soda as its media. It is non abrasive; rather it uses the explosive impact of the media crystals to remove the coating. We use food grade baking soda, at a specific crystal size. Over spray can be safely washed away.

We come to you with our mobile unit.
