Anti foul and paint removal

Soda blasting is a relatively new process. Developed in The USA; our process, blast media and equipment have been refined to the extent that it is all fully purpose specified and built achieving very high effectiveness and efficiency levels. The process has been used by us for a number of years now in New Zealand with many satisfied clients over a wide range of applications.

The Mighty 'Buster Blaster' Unit

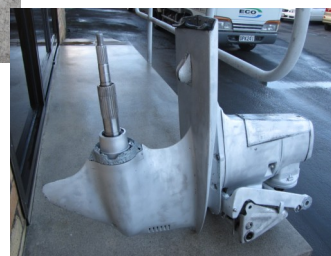

We have the very latest machine and technology imported especially for you and your tasks. The 'Buster Blaster' machine is the only purpose built and patented Soda Blasting machine in the world.

It's fast

In the marine industry we remove anti fouling or paint without harm to the substrate or gel coat. We can do it quickly, saving you time and money. We can carry out the procedure so quickly you can process several more boats in the same time it takes you to currently process one.

Whether the boat's hull is steel, timber, aluminium, or fibreglass the soda blasting process will remove the antifoul leaving the hull in an undamaged condition.

Hull and drive fittings do not require masking or removal, they are unharmed by the process.

It's safe

Soda Blasting uses environmentally friendly baking soda as its media. It is non abrasive; rather it uses the explosive impact of the media crystals to remove the coating. We use food grade baking soda, at a specific crystal size. Over spray can be safely washed away.

We can come to you with our mobile unit.

We tent up the job before beginning blasting to contain the blast media. We clean up afterwards.

Can we make it any easier!
